

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building Python-based backend applications, REST APIs, automation frameworks, and engineering tools. Experienced in Django, FastAPI, Flask, MySQL, MongoDB, Microsoft Azure, Docker, Jenkins, and CI/CD.

Hands-on experience developing CLI automation using Python and Paramiko and UI automation using Python and Playwright, along with API, integration, and end-to-end automation. Experienced in building automation workflows for cloud-based environments and collaborating with cross-functional engineering teams.

Currently exploring Generative AI, LLMs, RAG, embeddings, vector databases, and AI application development.

WORK EXPERIENCE

Software Engineer – Palo Alto Networks | 2023 – Present | Bengaluru, India

- Developed scalable Python/Django backend applications for enterprise data processing, configuration analysis, and workflow automation.
- Designed and implemented REST APIs, authentication, authorization, approval workflows, and audit mechanisms for enterprise applications.
- Built automated data-processing pipelines for large configuration and log datasets, reducing manual analysis effort by 70%+.
- Worked with MongoDB, MySQL, Azure Blob Storage, and cloud infrastructure to support large-scale data processing and application workflows.
- Developed automation and validation frameworks using Python, PyTest, Jenkins, and Docker, improving execution efficiency and engineering productivity.
- Investigated production issues through log analysis, debugging, API validation, and root-cause analysis, collaborating with cross-functional engineering teams.
- Contributed to AI/LLM-based applications involving RAG, vector databases, LangChain/LangGraph, and enterprise configuration analysis.
- Designed and tested distributed workflows across cloud environments, supporting reliable deployment and validation of enterprise applications.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, SQL
- **Backend:** Django, FastAPI, Flask, REST APIs
- **Databases:** MySQL, MongoDB
- **AI/ML:** LangChain, LangGraph, RAG, LLM Applications, Chroma, Pandas, NumPy
- **Cloud & DevOps:** Microsoft Azure, Docker, Jenkins, CI/CD, Git, Linux
- **Testing & Tools:** PyTest, Postman, Jira, GitHub, Swagger/OpenAPI
- **UI Automation:** Python, Playwright, End-to-End Testing, Browser Automation
- **Frontend:** HTML, CSS, React

PROJECTS

TechSupport File Analyzér

Python | Django | MongoDB | REST APIs | Azure | Automation

- Built a full-stack backend application for automated processing and analysis of large configuration and log datasets.
- Designed scalable backend workflows involving authentication, authorization, approval flows, and transactional data processing.
- Implemented large-file processing using cloud storage to handle datasets beyond conventional database document limits.
- Automated configuration analysis and visualization, reducing manual troubleshooting effort by 70%.

Processes Leak Detection System

Python | Pandas | NumPy

- Developed an automation system to identify memory leaks, file descriptor leaks, and CPU anomalies from 50,000+ process reports.
- Applied Pandas and NumPy for anomaly detection and trend analysis, improving test efficiency and scalability validation for distributed workloads.

ACCOMPLISHMENTS

- Ranked **top-10 innovation** out of 150 projects; showcased TSF Analyzer at company-wide All Hands
- Recognized for impactful automation contributions to security engineering
